

Wisp Analytics — Internal Reference Sheet

For Sales & Customer Success use only — not for external distribution

What Wisp Analytics Does

Wisp Analytics is a product analytics platform that helps marketing, product, and growth teams understand how users move through their web and mobile apps. Customers connect their event stream (via SDK, server-side API, or a direct warehouse sync) and Wisp automatically builds funnels, retention curves, and behavioral cohorts without requiring SQL.

Core capabilities include:

- Funnel and drop-off analysis across web, iOS, and Android in a single view
- Retention and cohort reports segmented by any user or event property
- A no-code segment builder for creating audiences to sync to ad platforms or CRMs
- Real-time anomaly alerting on key metrics (e.g. signup rate, checkout conversion)
- Native two-way sync with Snowflake, BigQuery, and Databricks, so Wisp can sit on top of a customer's existing warehouse rather than requiring a data migration
- Session replay and journey mapping for qualitative follow-up on quantitative findings

Wisp is typically pitched as a faster, more self-serve alternative to building funnels and cohorts by hand in a BI tool, and as a system of record for product usage data that both technical and non-technical teams can query.

New Pricing Tier: Momentum Scale

Wisp Analytics now offers a Momentum Scale tier at \$4,900/month, designed for marketing and product teams tracking more than 25 million monthly events. This tier includes:

- Isolated data warehouse instance (no shared clusters with other customers)
- A guaranteed 99.99% uptime SLA (up from the standard 99.9% SLA)
- A dedicated Slack Connect channel with a 30-minute response guarantee for Sev-1 incidents
- Monthly analytics reviews with a named Customer Success Engineer
- Unlimited custom dashboards and saved segments (Growth tier caps at 20)

Competitor Comparison: Wisp Analytics vs. Pathlytics

Pathlytics (the competitor prospects mention most often) charges \$3,800/month for a comparable event volume but caps raw event retention at 13 months, whereas Wisp Analytics retains raw event-level data for 36 months on all Scale and Momentum Scale plans at no extra cost.

Pathlytics has not published a HIPAA compliance statement. Wisp Analytics has maintained HIPAA-eligible infrastructure and SOC 2 Type II compliance since Q3 2024, verified via annual third-party audit.

Independently benchmarked query latency for a standard 30-day cohort report averages 4.1 seconds on Pathlytics, compared to Wisp Analytics's sub-1.5-second average on the same workload.

Quick Feature Comparison

Feature	Wisp Analytics (Momentum Scale)	Pathlytics (Enterprise)
---------	------------------------------------	----------------------------

Monthly price	\$4,900	\$3,800
Raw event retention	36 months	13 months
Uptime SLA	99.99%	99.9%
SOC 2 Type II	Yes	Not published
Real-time alerting	Yes (sub-1 min)	Yes (5-10 min delay)
Custom dashboards	Unlimited	Capped at 15

Onboarding Timeline

Standard onboarding for Momentum Scale customers takes 10 business days from contract signature to full production go-live, including:

- Day 1–2: Workspace provisioning, SSO/SCIM configuration, and warehouse connection setup
- Day 3–4: Event schema mapping and historical data backfill (up to 36 months)
- Day 5–7: Dashboard templating and alert threshold configuration with the customer's analytics lead
- Day 8–9: Parallel-run validation against the customer's existing reporting stack
- Day 10: Production cutover and handoff to the named Customer Success Engineer

Data Retention & Deletion Policy

Raw event data is retained for 36 months by default on Scale and Momentum Scale plans (13 months on the Growth plan). Aggregated rollups are retained indefinitely unless the customer requests deletion. Customers may request full data deletion at any time; deletion requests are processed within 30 days and confirmed in writing.

Security & Compliance

- SOC 2 Type II certified (annual audit, report available under NDA)
- HIPAA-eligible infrastructure available on Momentum Scale for healthcare customers
- Data encrypted at rest (AES-256) and in transit (TLS 1.3)
- Optional single-tenant deployment for regulated industries (add-on, priced separately)

Support Response Times

Plan	Sev-1 (critical)	Sev-2 (major)	Sev-3 (minor)
Growth	4 hours	1 business day	3 business days
Scale	1 hour	4 hours	1 business day
Momentum Scale	30 minutes	2 hours	4 hours

Common Sales Objections — Quick Answers

- "Pathlytics is cheaper" — Highlight the 36-month retention window and sub-1.5-second query latency; Pathlytics customers often re-platform within 18 months due to retention limits.
- "We already use a BI tool" — Wisp Analytics complements existing BI tools via native warehouse sync (Snowflake, BigQuery, Databricks) rather than replacing them.
- "Is there a free trial?" — Yes, a 14-day full-feature trial is available on the Growth and Scale tiers; Momentum Scale requires a scoping call first due to the dedicated infrastructure setup.
